

## Maths 25.1.21

### Measurement.

LO: To compare the length & height of different objects.

This week we're learning about measurement, how tall or how short an object is and also how long or how short an object is. Are you ready?

Can you go and find 6 different objects in your house? These can be anything, a cup, a sock, a pencil, a fork?

Once you have your 6 objects, put 3 to one side. We are going to measure the **height** of your first 3 objects. Which is the tallest? Which is the smallest? Can you draw them on the line below in order? Start with the shortest object first.

---

Shortest

Tallest

---

Now, using your 3 other objects, we're going to measure the **length** of these objects. Which is the shortest? Which is the longest? Draw them in order on the line below, starting with the shortest object first.

---

Shortest

Longest
