

#### 4.2.21

#### Measurement.

LO: To find the mass of objects using a specific unit.

Task: Find an object which you can use as your unit of measure, this could be pasta, paperclips, hair grips, pencils, pens – anything which you have a few of! Using different objects in your house, estimate how heavy it will be using your unit of measure eg I estimate that a fork weighs 5 pieces of pasta. Then have a go at weighing them by holding them in each hand. Was your estimate correct? Or will you need more or less to match the weight? The first one has been completed as an example.

<b>Object</b>	Spoon								
<b>Estimate</b>	3 pieces of pasta								
<b>Mass</b>	5 pieces of pasta.
