Birds in Your Garden

There are many different types of bird that you might see in your garden. Here are a few of them:

Robin

Robins are very easy to spot in your garden. They have a red breast and a brown head and back. They have long legs and a short tail. They are very territorial. This means they live in one area and will stop other robins from living there too. They eat insects, fruit, seeds and worms.

Jackdaw

The jackdaw is a noisy bird. You would definitely notice this bird in your garden. They are quite large, and have a grey neck, a stubby beak and white eyes. They eat insects, dead animals, eggs, young birds and seeds. Jackdaws are known for stealing things; not just food but objects too!

Blue tit

The blue tit is a very small bird with bright blue and yellow feathers. The male and female look the same. They eat insects, caterpillars, seeds and nuts. They often eat from bird tables and live in garden nesting boxes. In winter, they meet with other blue tits to make it easier to search for food.

V **vocabulary**

What does territorial mean?

R **retrieve**

What does a robin eat? Tick one.

- ☐ insects, fruit, worms and seeds
- ☐ fruit, insects and eggs
- ☐ worms, insects and eggs
